II B. Tech – II Semester

(20ME4760) BIOMECHANICS

Int. Marks Ext. Marks Total Marks

30 70 100 L С Т Р 3 3

Pre-Requisites: Engineering mechanics, Human anatomy

Course Objective:

The student should be made to:

- Explain the principles of mechanics.
- Discuss the mechanics of physiological systems.
- Explain the mechanics of joints.
- Illustrate the mathematical models used in the analysis of biomechanical systems

UNIT-I: Foundations of Human Movement:

Basic movement terminology - Biomechanics vs Kinesiology - Anatomy Vs Functional Anatomy - Linear Vs Angular motion - Kinematics Vs Kinematics - Statics Vs Dynamics - Anatomical movement descriptors - Segment names - Anatomical names - Movement description - Basic movements -Specialised movement descriptors - Reference systems - Example of Joint movement characteristics Mathematical overview - UNITs of measurements - Vector analysis - Coordinate systems. Forces and moments - Muscle forces Statics - Newton's laws - Solving problems - Simple musculoskeletal problems - Advance musculoskeletal problems Kinematics - Rotational and Translational motion - Displacement, Velocity and acceleration Kinetics - Inertial forces - Work Energy and power - Friction

UNIT-II:

Biomechanics of Joints Classification of Motion - Classification of joints - Factors influencing motion at a joint - The effect of joint structure or joint motion - External forces on a joint - Interaction between joints and the external environment. Biomechanics of Cartilage: Mechanical behaviour and modelling -Material properties - Relationship between mechanical properties and composition - Mechanical failure of cartilage - Joint lubrication - Models of Osteoarthrosis

UNIT-III: Biomechanics of Skeletal Muscle:

Structure of an individual muscle fibre - The connective tissue system within the muscle belly Factors that influence a muscles ability to produce a motion - Effect of fibre length on joint excursion Factors that influence a muscle strength - Muscle size and its effect on force production - Relationship between force production and instantaneous muscle length - Relationship between a muscles moment arm and its force production - Relationship between force production and contraction velocity - Relationship between force production and level of recruitment of motor UNITs within the muscle - Relationship between force production and fibre type. Structure of connective tissue - composition of tendons and ligaments Mechanical properties - determination of stress and strain, stress - strain curve for tendons and ligaments modes of failure - effects of physical conditions on mechanical properties - biological effects on mechanical properties Response of tendons and ligaments to immobilisations - immobilisation and remobilisation of normal connective tissue - immobilisation and mobilisation in healing connective tissue Response of tendons and ligaments to stress enhancement Skeletal considerations for movement -Functions of skeletal system - Levers - Support - Types of Bones - Biomechanical characteristic of Bones - Bone tissue - Architecture of Bone - Strength and stiffness of Bone - Types of load - Bonny articulations

UNIT- IV: Functional Anatomy:

The Upper Extremity - Introduction - The shoulder complex - The elbow and radioulnar joints - The wrist and fingers The Lower Extremity - The pelvic and hip complex - The knee joint - The ankle and foot. The trunk - The vertebral column - Cervical region - Thoracic region - Lumbar region - Combined movement of pelvis and trunk - Posture - Conditioning - Contribution of trunk muscles to Sports Skills or movements.

UNIT-V:

Mechanical Analysis of Human Motion: Linear kinematics - Linear kinematic analysis - Position and displacement - Velocity and speed - Acceleration - Differentiation and integration - Kinematics of running - Kinematics of projectiles - Equations of constant acceleration. Angular kinematics - Angular motion - Measurements of angles - Types of angles - Representation of Angular motion vectors - Lower extremity joint angles - Relationship between angular and linear motion - Angular kinematics of running. Linear kinetics - Force - Laws of motion - Types of Forces - Representation of Forces acting on a system - Forces occurring along a curved path - Special force applications. Angular Kinetics - Torque - Centre of mass - Rotation and leverage - Moment of inertia - Angular momentum - Angular analogs to Newtons laws of motion - Special torque applications.

Course Outcome:

At the end of the course, the student should be able to:

S. No	Course Outcome											
CO1	illustratre the principles of biomechanics											
CO2	outline the principles of biofluid dynamics.											
CO3	explain the fundamentals of bio-solid mechanics.											
CO4	apply the knowledge of joint mechanics.											
CO5	show examples of computational mathematical modelling applied in biomechanics.	L2										

Correlation of Cos with POs & PSOs:

CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
C01	3	3	3	3	3	3	1	1	2	1	1	3	3	2
CO2	3	3	3	3	3	3	1	1	2	1	1	3	2	2
CO3	3	3	3	3	3	3	1	1	1	1	1	3	3	1
CO4	3	3	3	3	3	3	1	1	1	1	1	3	3	2
CO5	3	3	3	3	3	3	1	1	1	1	1	3	3	2
